

ISRAEL TORRES

Infrastructure & Systems Engineer | Network Infrastructure | IT Automation

Dallas-Fort Worth, TX | 214-229-9210 | israel@israeltorres.dev | linkedin.com/in/israel-torres | israeltorres.dev

PROFESSIONAL SUMMARY

Infrastructure and systems engineer with hands-on ownership of multi-site networking, Microsoft 365, identity, telephony, Linux services, workplace technology, and internal automation across 27 locations, with 12 additional centers planned. Primary Dallas-Fort Worth resource and escalation point, partnering with the IT Director on new-center deployments and network operations, and with executive leadership on technology initiatives. Combines production infrastructure administration with software engineering to reduce manual effort, improve visibility, and standardize operations.

CORE TECHNOLOGIES

Networking & Infrastructure: Cisco Catalyst, Dell PowerConnect, UniFi, MikroTik, VLANs, switching, wireless, DHCP, site-to-site VPN, TDR/cable diagnostics, site surveys, RF and channel planning, structured cabling

Systems & Workplace Technology: Microsoft 365, Entra ID, Exchange Online, Intune, Conditional Access, FusionPBX, SIP, Zoom Phone, printers, conference-room technology, digital signage

Automation & Development: Python, PowerShell, TypeScript, JavaScript, Node.js, Express, React, Microsoft Graph, REST APIs, PostgreSQL, SQLite, Prisma, GitHub Actions, Linux, Nginx, PM2, Cloudflare

PROFESSIONAL EXPERIENCE

Lucid Private Offices (formerly WorkSuites) — IT Support Specialist | Dallas-Fort Worth, TX

February 2023 – Present

- Serve as the primary Dallas-Fort Worth infrastructure resource and escalation point for a 27-location workspace operator, spanning networking, systems, telephony, workplace technology, and end-user support.
- Partner with the IT Director on new-center deployments and ongoing network operations — Cisco switch configuration, VLAN implementation, MikroTik VLAN/DHCP setup, UniFi device adoption, conference-room and device networks, wireless site surveys, channel planning, and structured-cabling coordination.
- Designed and developed the Lucid Infrastructure Operations Platform with direct IT Director review; the production system deploys, manages, and troubleshoots sites through switch and port visibility, VLAN management, PoE control, MAC tracing, TDR diagnostics, UniFi administration, and Wi-Fi analytics, cutting an access point migration workflow from ~45 minutes to ~2 minutes.
- Created a QR-based structured-cabling workflow that lets vendors scan labeled network drops and map them automatically into internal infrastructure records, improving deployment documentation.
- Engineered the Lucid Automation Server for 400+ employees on Microsoft Graph, TypeScript, PostgreSQL, and Prisma, automating Exchange workflows, VLAN drift audits, and access point monitoring; delivered identity and occupancy tooling syncing Entra ID with UniFi Identity by role and location, plus ezeep print automation across ~3,000 assigned seats.
- Administer Microsoft 365, Exchange Online, Entra ID, and Intune across identity lifecycle, Conditional Access, licensing, and device compliance; operate FusionPBX telephony organization-wide including SIP trunking, dial plans, extensions, and inbound routing, plus Zoom Phone; maintain Cloudflare and Linux-hosted services.
- Advise executive leadership on technology initiatives, currently building a centralized digital-signage solution requested by the COO with a staff tool for publishing PDFs, videos, and websites to Intune-managed kiosk displays. Deploy internal services as Node.js and Express applications behind Nginx and Cloudflare, managed with PM2, authenticated through Entra ID OIDC, and released via GitHub Actions.

Toshiba Global Commerce Solutions — IT Field Service Technician II | Dallas-Fort Worth, TX

July 2022 – February 2023

- Diagnosed, repaired, and maintained customer technology across a Dallas-Fort Worth field territory, handling hardware and peripheral troubleshooting, component replacement, preventive maintenance, and onsite service.

NCR Corporation — Field Service Technician II | Dallas-Fort Worth, TX

October 2021 – July 2022

- Installed, configured, and repaired ATM technology across Dallas-Fort Worth for major financial institutions, resolving hardware, networking, and software issues within service-level agreements.
- Completed hands-on technical training at NCR University in Peachtree City, Georgia, covering mechanical, electrical, networking, and technical diagnostics.

PERSONAL PROJECTS

LUMEN — Private AI Platform — Personal Project | In Development | Node.js · Express · Ollama · Kokoro ONNX · RTX 2070 Super

- Built a functional self-hosted AI platform on dedicated Windows and GPU infrastructure, integrating Ollama for local LLM inference with real-time streaming responses, document processing, image generation, and Kokoro ONNX text-to-speech.
- Developed document workflows covering PDF, TXT, CSV, and Markdown extraction with automatic prompt context injection, alongside configurable model selection, persistent conversation history, and a framework-free responsive web interface.
- Implemented multi-backend image generation with automatic detection and fallback across Stable Diffusion WebUI, ComfyUI, and an optional cloud provider, plus CPU-only speech synthesis that adds no GPU overhead.
- Designed around an 8 GB RTX 2070 Super constraint, building hands-on experience with model selection, quantization, VRAM limitations, local inference optimization, and API orchestration.

EDUCATION & CERTIFICATIONS

University of North Texas — Bachelor of Applied Arts & Sciences | 2024

Townview School of Business and Management — Information Technology Cluster | 2017

TestOut Network Pro • TestOut PC Pro

Certifications: CompTIA Network+ ce • CompTIA A+ ce
